

Know **5** steps

vision
vision

Assessing – *implementation*

Accept and support the first four steps of EBP

Amend the fifth step to include practice implementation as well as self-evaluation

Multiple tools exist for assessing the five steps of EBP – the know **5** steps group aims to compile a directory of these tools.

- The Centre for Evidence-Based Medicine will host the directory
- olive.goddard@dphpc.ox.ac.uk
- ? Need for someone to edit this content

vision

Only tools that have been used to assess at least one component of the 5 steps of EBP should be submitted.

Ideally information on evaluation in practice and the context and setting in which the tools have been used should be provided.

VISION

- The future.....
- We will have a directory of tools people can try
- We will have increased experience of using these tools, and ?? feedback
- We hope to have a better idea of evaluating these tools
